

CRYSTAL URETHANE[®]

A Unique Waterborne Oil-Based Urethane for Wood Applications

TIMES ARE CHANGING. Sustainable and envirosafe building practices used to be a future trend - now they are an industry standard. Architects and builders are looking for materials to help their projects become certified as "green and sustainable" for financial incentives, LEED credits, and a sincere concern for the environment and human health.

- Are you still using the flammable, oil-based urethanes for doors, windows, trim, wood walls and paneling?
- Are you aware of the health and environmental hazards of these high VOC oil-based urethanes?
- Wish you had a finish that would perform as well as the solvent-borne oil-based finishes without the environmental impact?

WE'LL CONSIDER IT DONE!

In response to market demand, Timber Pro's clear Crystal Urethane bridges the performance gap between high VOC solvent-borne oil urethanes and water-based clear acrylic coatings.

This is coating technology at its finest - the beauty and durability of oil without the fumes and flammability!

THE FUTURE IS NOW

Envirosafe waterborne oil-based technology that outperforms both traditional oil-based urethanes and water-based polyurethanes or clear acrylic wood finishes. (Not for use on exterior wood siding.)

Wood looks as if it's been hand-rubbed with oil for years... a rich patina you can't achieve with acrylic films.

Chemical/Stain Resistant

Equal to solvent-borne oil urethanes. Our Crystal Urethane significantly outperforms polyurethanes and acrylics in resisting stains from chemicals, dyes, ink, food, wine, etc.

Low VOC's

Crystal Urethane is nearly odorless. This means it is not necessary to vacate the premises for hours or days while product is drying.

Non-Yellowing

Timber Pro UV Crystal Urethane will not yellow when it cures like solvent-borne oil urethanes.

Fast Drying

Timber Pro UV Crystal Urethane dries fast. One to two hours between coats allows for multiple coats to be applied in one day. This saves time and money.

Hardness/Abrasion Resistant

Our product dries harder and is more abrasion-resistant than flammable oil urethanes or clear acrylic finishes.

Impact/Mar Resistant

Crystal Urethane is just as effective as more traditional oil urethanes, but much more resistant than polyurethanes or acrylic coatings.

AN EXCELLENT PRODUCT FOR ALL OF THESE APPLICATIONS:

- Wood Cabinetry
- Wood Doors and Windows
- Interior Wood Walls
- Interior Logs and Railings
- Wood Paneling and Trim

UNIQUE BENEFITS OF TIMBER PRO UV CRYSTAL URETHANE

- Contains Natural Oils
- Waterborne
- Low Odor and Non-Flammable
- Environmentally Safe
- Easy to Use, Dries Fast
- Tintable with Timber Pro® Pigment
- Does Not Yellow Over Time
- Will Not Crack or Peel
- Creates Easy-to-Clean Surface
- Extremely Durable
- Clean Up is Fast and Easy with Soap and Water
